

# Template Week 7 – Host your website on GitHub

Student number: 590190

**Domain name (URL) of your website on GitHub:**

<https://chanjune.github.io/it-fundamentals-site/site/>

**Relevant screenshots + motivation:**

I hosted my personal website using GitHub Pages to make it accessible online. First, I created a public repository named 'it-fundamentals-site' and uploaded all my HTML, CSS, images, and PDF files. Then, I enabled GitHub Pages in the settings menu (branch: main). Now, my website is live at the URL above, and the PDF files are also accessible via the /pdf/ directory.

Ready? Save this file and export it as a pdf file with the name: **week7.pdf**
